FinTech on the Web Workshop 2021

Experimental Results

Error Analysis

Participants

FinTech is an emerging and popular topic in both financial and engineering domains. Interest and utility are key points in the FinTech revolution. In Brazil, 7% of financial institutions are expected to increase their investments, and the customers can do some financial operations such as transfer by themselves via their phone. The next few years, mobile banking will be the rage as mobile devices become more and more prevalent. Some infrastructures for developing FinTech are already here. We think that it is a good time to hold a forum to discuss the possible application scenarios of using the information from the Web of FinTech field.
